| | The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply | | | | | | | | |
| A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). - Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). Status | | | | | | | | | |

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Hara et al.

Hara et al. (US Patent Number 6,398,366 B1) discloses a projector (1), comprising a light source device (6), luminous flux (L1) emitted from the light source device (6) being magnified and projected so as to form a projected image after being modulated (column 15, lines 31-35); an outer case (41) that accommodates the light source device (6), a cooling passage (47, 48, 49) that cools the outer case and the light source device (6) formed in a vicinity of the light source device in the outer case (41), the cooling passage (47, 48, 49) being formed by cooling air being blown out of a cooling duct arranged inside the outer case (column 12, lines 5-11), a cooling air inlet hole (47) of the cooling duct being capable of taking cooling air from the exterior (column 9, lines 45-50) of the outer case (41), and a discharge hole of the cooling duct having an opening formed to directly blow the cooling air on an internal side face of the outer case (column 9, lines 50-57); a restrictor (55) formed in an upstream side of the opening of the cooling duct (47). The cooling air inlet hole of the cooling duct (48) is

divided into two directions by a first passage (i.e. air flow inside the light source; Figure 6) and a second passage (i.e. outside the outer case that includes the light source; Figure 6), the first passage cooling an inside of a light source lamp of the light source device (column 12, lines 12-17), while the second passage being capable of cooling an outer peripheral portion of the light source lamp and the internal side face of the outer case (column 12, lines 17-22), including a centrifugal fan (32) which is connected to the cooling duct in the side of the cooling air inlet hole (column 8, lines 4-11). The centrifugal fan (32) is a sirocco fan disposed on an internal side face of the outer case (column 7, lines 20-23), and further including an exhaust fan (25) arranged on a side face perpendicular to the internal side face of the outer case that exhausts cooling air that has been received from the sirocco fan and the cooling duct and that has cooled the outer case (column 7, lines 17-20).

Response to Arguments

- 3. Applicant's arguments filed 10/06/2003 have been fully considered but they are not persuasive.
- 4. The applicant has argued that the prior art does not teach "a cooling passage that cools the outer case and the light source device formed in a vicinity of the light source device in the outer case". However, Hara et al. (US Patent Number 6,398,366 B1) teaches such cooling passage (47, 48, 49) that cools the outer case and the light source device (6) formed in a vicinity of the light source device in the outer case (41).

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Fujimori et al. (US Patent Number 6,364,492 B1) discloses a projector wherein the inside of the power source unit can be independently and efficiently cooled.

Fujimori et al. (US Patent Number 6,637,895 B2) teaches a projector having a suction opening arranged in the vicinity of an air inlet in the external case.

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Magda Cruz whose telephone number is (703)308-
